## **EC DIRECTIVE COMPLIANCE**

EXERGEN CORPORATION is focused on ensuring compliance with the various European Directives (including 2002/95/EC and 2002/96/EC) on RoHS (Restriction on Hazardous Substances), which cover polybrominated biphenyls (PBB), polybrominated diphenyl ethers (PBDE), mercury, cadmium, hexavalent chromium and lead.

After carefully reviewing our Bill of Materials for all Industrial products (IRT/c, SmartIRT/c, XMTR, SnakeEye, D Series, DX Series, E Series and all accessories) we have found replaceable RoHS compliant materials for the non RoHS compliant materials. So we will be able to manufacture RoHS compliant products for the complete industrial product line.

Any order placed after July 1, 2006 to be shipped to Japan or Europe will be automatically manufactured as RoHS compliant and will be identified with a label on the package. The serial # identification can be traced back to the Production Batch Traveler to ensure the unit was manufactured with RoHS compliant materials. Orders shipped anywhere but Japan or Europe requiring RoHS compliant products, must be ordered as RoHS, and then the product will be manufactured with RoHS compliant materials. If the purchase order does not state RoHS required, the product will be manufactured with non RoHS materials.

When all non RoHS materials are extinguished from our inventory, all products will be RoHS (no requests required). This date is not determined at this moment.

The performance and quality of the Exergen product line will not change with the RoHS compliant materials. Should you require further assurance for specific products or have any questions, please send a written request to [industrial@exergen.com](mailto:industrial@exergen.com), referencing the date of purchase, specific product number, and we will respond accordingly.

Thank you.

Sincerely,

*Robert W. Harris*
