

Put us on your packaging machines, and you may require some extra equipment.

Exergen makes the fastest packaging line even faster. Because IRt/c™ non-contact temperature sensing technology lets you really put the pedal to the metal. Which means peak throughput, whatever the product.

IRt/c sensors measure actual product temperature with unprecedented speed and accuracy. They come hermetically sealed, in a range of sizes and configurations for every imaginable application.

Call now for more information and a free copy of The IRt/c Book, with case histories documenting increased speeds of heat/induction sealers, drying/curing/mixing and hot-melt sealing operations, plus complete IRt/c specifications.
