

This is no place to come unglued.

An open flap can mean a real flap for you: unhappy customers – or a lot worse. But SnakeEye™ non-contact Infrared Sensing Technology can give you the confidence you need to keep it all together.

Breakthrough SnakeEye technology inspects both the presence and position of thermal processes such as hot-melt adhesive, induction sealing, polybag heat sealing, laser date code engraving, bottle cap lining or thermal footprint position registration with unsurpassed reliability.

SnakeEye delivers full confidence in production quality because it inspects every product on your line in real time, at speeds up to 1,000 feet per minute (300 meters per minute).

SnakeEye increases quality and throughput at the same time. Call now for more information, or visit us on the World Wide Web.

Do it now – before things come unglued.
