

IN-LINE PRE-CALIBRATED TRANSMITTER FOR EASY, RELIABLE INSTALLATION

Model t/c.XMTR- * - ** 4-20 mA Transmitter

Current loop transmitters for thermocouples have traditionally been designed as "hockey pucks" in order to fit thermowell heads, thus complicating installation for applications not using a thermowell, and requiring a housing for protection. Additionally, they generally have to be calibrated to a specific range, usually with thermocouple simulators or other such device, thus requiring significant set up time and the possibility of unauthorized recalibration.

The t/c.XMTR is designed to overcome both of the costly inconveniences:

- In-line design is only slightly larger than the cable and requires no mechanical support.
- Precalibrated for thermocouple type and temperature range eliminates all adjustments, requirements for simulators, etc.
- Hermetically sealed stainless steel construction is suitable for the harshest service without any additional packaging.

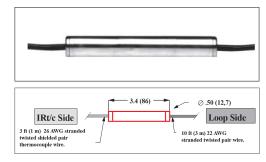

The t/c.XMTR is specifically designed to interface to any model IRt/c (or any conventional thermocouple) by a simple thermocouple connector or splice. The 2-wire current loop can be used in any conventional current loop circuit that is scaled for the temperature range of interest.

Model Selection

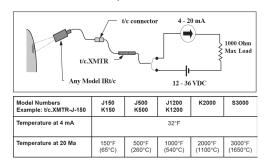

- 1. Select the correct IRt/c model for the application: target temperature, target material, field-of-view.
- 2. Select the t/c.XMTR model for the t/c type and temperature range from the table below. Example: t/c.XMTR-K150

Installation

- 1. Install IRt/c as normal.
- 2. Connect IRt/c output cable to the thermocouple input side of the transmitter using standard t/c connector, splice, or other standard method of connecting thermocouple cables. Transmitter should be located in a an environment no higher than 158°F (70°C) in temperature. Additional t/c extension wire may be added as required. Use of twisted shielded t/c wire is recommended (same as on the IRt/c and transmitter), and maintain shield connections.
- 3. Check load on transmitter and power supply voltage for correct range (10 VDC minimum @ 10W; to 22 VDC minimum @ 1KW).

- 4. Set readout device (controller, computer, PLC, etc.) for 4 to 20 mA range to match the t/c. XMTR model range.
- 5. Perform final calibration of IRt/c installation in accordance with IRt/c instructions, using offset on current loop readout device.
- 6. Installation complete.
